Occupational Injury Epidemiology Highlights of research and training at the UMN

Marizen Ramirez, MPH, PhD Associate Professor, EnHS, School of Public Health Co-Director, Occupational Injury Prev Research Training Program, Midwest Center for Occupational Health and Safety

Outline

- Brief overview: public health burden
- Breadth of Occ Inj Research at UMN
 - Faculty Research
 - Agricultural Injuries
 - Workplace Violence
 - Trauma and PTSD
 - Doctoral Student Research
 - Janitor Study
 - Driving studies
 - Older workers

Employed Americans spend about 6 hrs/day working

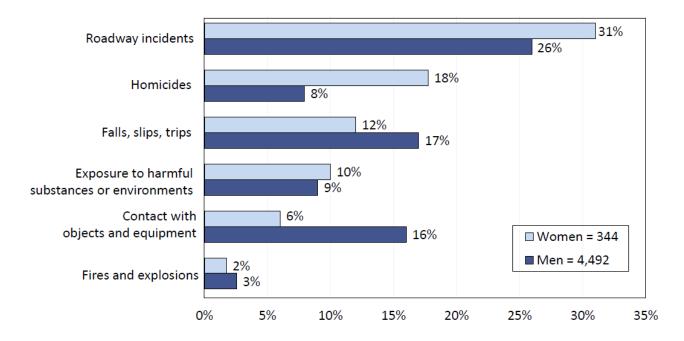

Occupational injuries account for 30-40% of <u>all</u> injuries to Americans

- ✓ Among all working-age populations (ages 18 to 64) in the US, 28.6% of all injuries occur while working
- ✓ Among working-age men, 37.5% occur while working
- ✓ Among working-age women, 20.5% occur while working

Smith et al., 2005

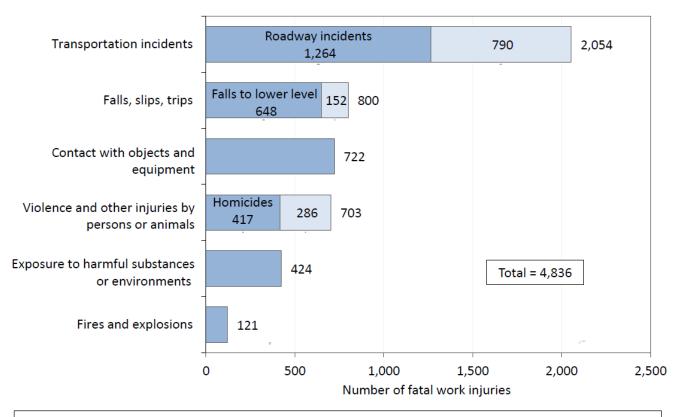

Data source: National Health Interview Survey

Distribution of fatal injury events by gender of worker, 2015

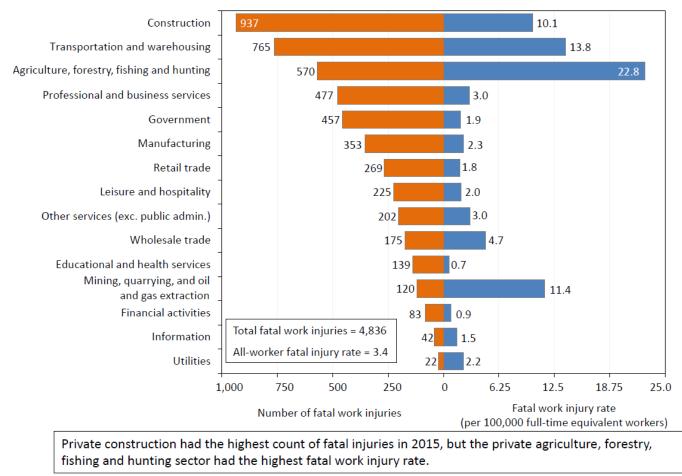

Women experienced a higher proportion of fatal injuries due to roadway incidents and homicides relative to men. Men incurred a higher proportion of injuries from falls, slips, and trips and contact with objects and equipment. Men and women experienced similar proportions of fatal injuries from exposure to harmful substances or environments and from fires and explosions.

Fatal occupational injuries by major event, 2015

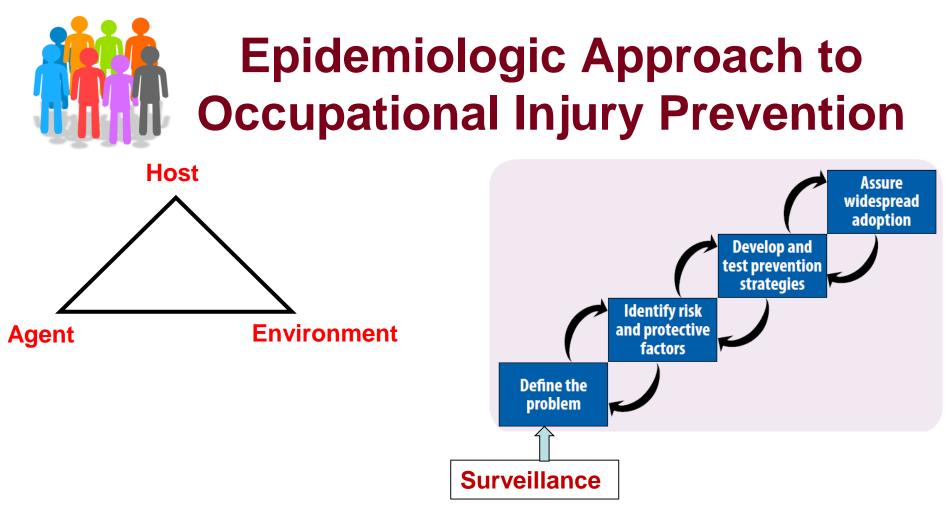

More fatal work injuries resulted from transportation incidents than from any other event in 2015. Roadway incidents alone accounted for about one out of every four fatal work injuries.

Number and rate of fatal work injuries by industry sector, 2015

Note: Fatal injury rates exclude workers under the age of 16 years, volunteers, and resident military. The number of fatal work injuries represents total published fatal injuries before the exclusions. For additional information on the fatal work injury rate methodology, please see www.bls.gov/iif/oshnotice10.htm. Source: U.S. Bureau of Labor Statistics, Current Population Survey, Census of Fatal Occupational Injuries, 2016.

Bruce Alexander Chair, EnHS Director, UMASH

Injuries in Swine Workers

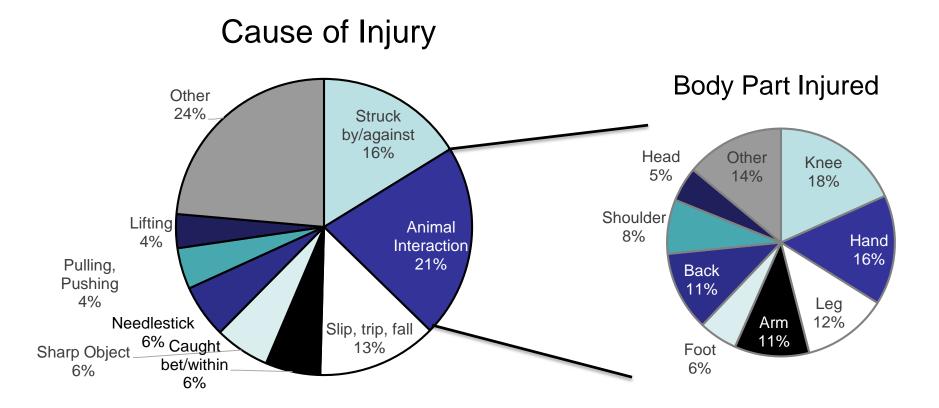

- Ag workers ~8x more likely to die on the job than all other workers; 40% higher rate of non-fatal injuries
- Animal agriculture workers have higher rates of injury than other ag workers 6.7 vs 5.5 injuries/100 workers (BLS)

Evaluated worker's compensation and OSHA data from swine operations in 3 states

Characteristics of Injuries in Swine Production

Misclassification of animal interactions?

VIOLENCE AND OTHER INJURIES BY PERSONS OR ANIMALS include all intentional injuries; injuries involving weapons regardless of intent; & injuries involving direct physical contact with persons, animals, or insects regardless of intent.

	Report only	Medical	Indemnity	Total
Original Coding	577	304	267	1148
Study reclassification	514	253	179	946
Percent agreement	89.1%	83.2%	67.0%	82.4%

Susan Gerberich Professor, EnHS Director, MCOHS

Violence against teachers: Etiology and Consequences

- K-12 MN educators identified from MN Dept of Ed; Mail questionnaires
- <u>Rates</u>:
 - physical assault: 5.3/100,000
 - Non-phys assault: 26.4/100,000
- <u>Risk factors</u>: special education vs. standard class, worked in public/alternative vs. public school

Violence against Nurses Gerberich et al., 2005

- Case control study ~1200 MN nurses fr. licensing database
- Incidence of assault: 13.2/100 per year
- Risk/Protective Factors:
 - nursing homes/long-term care (OR=2.6; 95% CI =1.9-3.6)
 - emergency departments (OR=4.2; 95% CI =1.3-12.8)
 - psychiatric departments (OR=2.0; 95% CI=1.1-3.7)
 - poorly lit environments (OR=2.2; 95% CI=1.6-2.8)
 - increased shift hours (OR=1.05; 95% CI=0.99-1.11)
 - carrying cell phones/alarms (OR=0.3; 95% CI=0.2-0.7)

Hyun Kim Assistant Prof, EnHS

World Trade Center Studies Evaluating health impacts

Meta analysis of PTSD risk among WTC exposed. Having injury from WTC attack was the strongest risk factor for PTSD

Farm Equipment Roadway Study, 2011-16

M Ramirez, C Peek-Asa (U Iowa), D McGehee (U Iowa)

Effectiveness of lighting and marking laws on reducing crash rates involving farm equipment

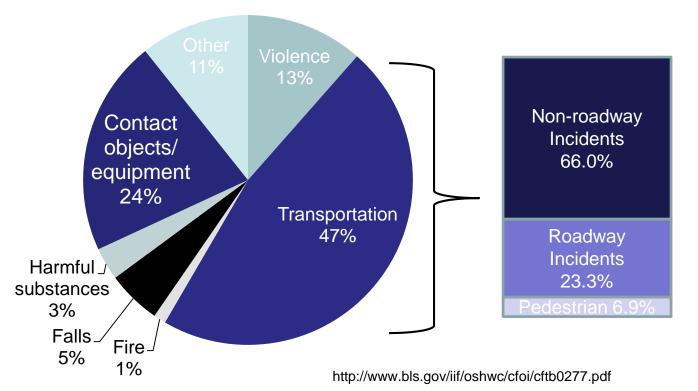

Prepared by: The Committee on Agricultural Safety and Health Research and Extension

North Central Education/Extension Research Activity Committee 197 Cooperative State Research, Education, and Extension Service United States Department of Agriculture

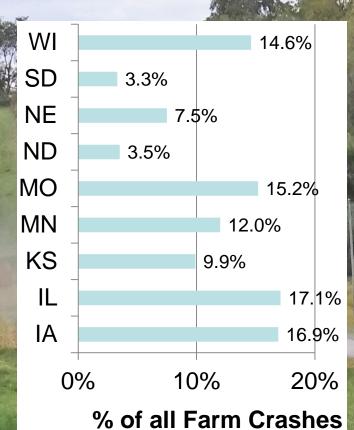

February 2009

"Research is needed to assess the understandability, effectiveness and best use practices of lighting and marking agricultural equipment on public roads" chelor' Chris Soules formally rged with felony hit-and-run after I Iowa crash

Burden of Transportation-Related Deaths among Agricultural workers U.S. 2013

7,094 crashes 12,938 vehicles/drivers 14,842 persons

Nine State Farm Vehicle Related Crashes (2005 - 2010)Legend Farm Vehicle Related Crash • Map Created by: Elizabeth Mello Injury Prevention and Research Center University of Iowa, 2014

Policy Evaluation: **Do states with stricter policies on lighting and marking have lower crash rates?**

Methods: collecting and coding laws

- ✓ LexisNexis search
- Compare laws to standards offered by the American Society for Agricultural & Biological Engineers (gold standard)

Methods: Analysis

- Generalized Linear Models with Generalized Estimating Equations
- ✓ Controlled for population size, cultural tightness of a state, % GDP from Ag

Policy Evaluation Form used for Screening State Codes

Policy Questions	lowa	Kansas	Society for Agricultural and Biological Engineers – Standard
How many headlights are required on tractors and self- propelled agricultural equipment ?	1	2 ✓	2
Are taillights/flashers/ reflectors required to define outer extremities of the unit?	No	Yes, reflectors ✓	Yes, reflectors
Are turn signals required on tractors and self propelled ag equipment?	No	No	Yes

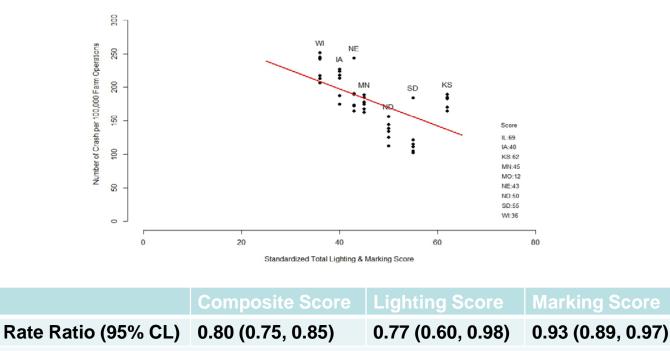

Generate compliance score as the sum of compliance to each item

Compliance Scores

State	Level of Compliance with ASABE Standards	Lighting Score	Marking Score
Illinois	69	73	59
Kansas	62	62	59
South Dakota	55	54	59
North Dakota	50	58	45
Minnesota	45	46	41
Nebraska	43	50	36
Iowa	40	50	27
Wisconsin	36	42	27
Missouri	12	15	5

Associations between Compliance Score and Crash Rates

Figure 2. Scatter Plot of Farm Equipment Crash Rate by The Policy Compliance Score for 9 States, 2005 - 2010

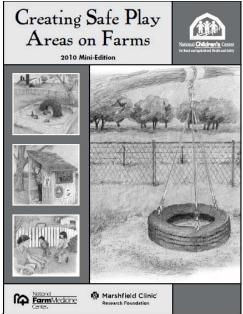

Generalized Linear Model fit with GEE, negative binomial link function Rescaled for every 5 unit increase in compliance

Safe Play Areas: A Process Evaluation

M Ramirez¹, E Fisher², T Ellis³, R Rautiainen⁴, M Robertson¹,

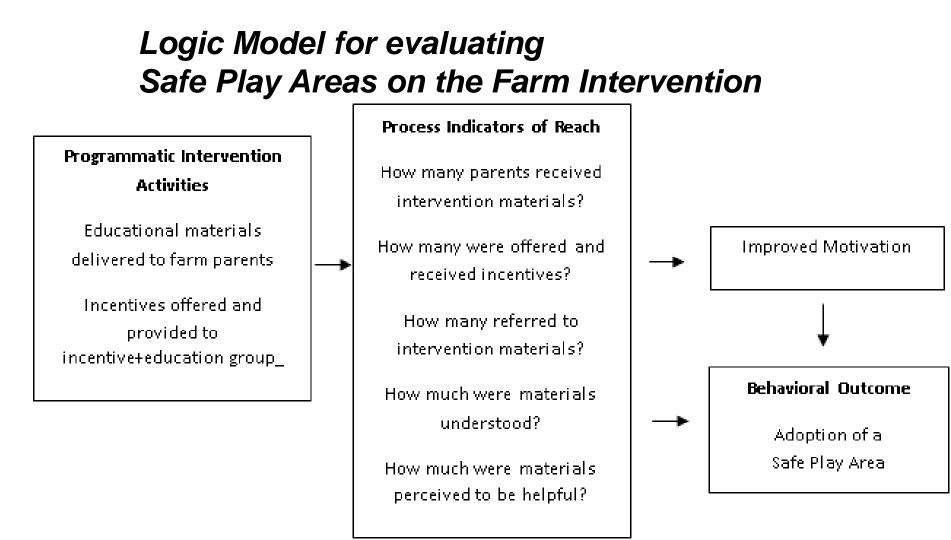

Parent-based educational intervention

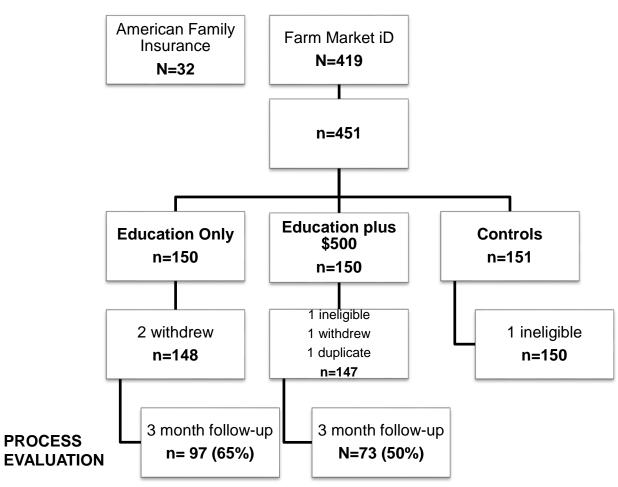

RCT among 450 farm families with children <7 from MN, SD, WS, NE, MO, IA

1 UMN, 2 University of Iowa, 3 National Farm Medicine

Center, 4 University of Nebraska Medical Center

Study Sample

Intervention uptake and motivation by randomized group

	Not at all <u>helpful</u>				>				Very helpful		
Comprehension Sum Scale	1	2	3	4	5	6	7	8	9	10	
Helpfulness Sum Scale	1	2	3	4	5	6	7	8	9	10	
Referral Sum Scale	1	2	3	4	5	6	7	8	9	10	
Motivation Scale*	1	2	3	4	5	6	7	8	9	10	

*significant difference at alpha>=0.05 Wilcoxen rank-sum test

Education Education + only incentive

How do intervention and uptake materials impact motivation?

	β (95% Cl)				
Education Plus vs. Education Only	0.89 (0.05, 1.74)				
Helpfulness	0.67 (0.52, 0.83)				
Referred	0.26 (0.14, 0.39)				
Comprehension	0.21 (0.03, 0.40)

HIGHLIGHTS OF UMN TRAINEES

Janitor Injury Burden

Deirdre Green OIPRT Trainee Janitors incur **46,000 work-related injuries** resulting in days away from work (US BLS, 2012) **16th** highest in all occupations (n=~800)

STUDY AIMS

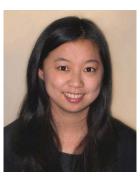

- Determine injury incidence and severity in Janitors and associated risk factors
- Examine relation between workload and injury through sleep quality
- Study Population
 - Service Employees International Union
 - Twin Cities: 4000 Members (60% Spanish, 20% Somalian)

Janitor Study

 Cross-sectional survey to ~4000 union members, at baseline and follow-up

 1 month workload direct sampling to obtain full shift workload exposure (steps taken, active minutes, floors climbed, heart rate, sleep duration/quality)

Transportation-Related Research: High-Risk Rural Intersections & Intervention efficacy

Disi Tan, OIPRT Trainee

STUDY AIMS

- Identify the magnitude of and risk factors for rural intersection-related crashes and the severity of injuries
- Evaluate an intelligent rural intersection collision warning system (RICWS)

A Driving Simulator Study for Evaluating the Effectiveness of RICWS Signs at Rural Thru-STOP Controlled Intersections

Findings:

• The sign intervention demonstrated the most safety potentials for experienced, middle-aged drivers.

HumanFIRST Partial Motion-based Driving Simulator Set Up and Smart-Eye Pro Eye Tracking Camera

Navneet Baidwan OIPRT Trainee

ASSOCIATION BETWEEN WORK-RELATED CHARACTERISTICS AND INJURIES AMONG THE AGING US WORKFORCE

• By 2020, 25% of US workforce will be aged 55+ years

Overall aim: Longitudinally analyze work-related characteristics, including work-related psychosocial characteristics causally associated with injuries

Study setting and sample: A cohort of 7,212 adults aged 50+ years from the Health and Retirement Study (HRS)

Demographic factors Health conditions & Lifestyle factors

> Work-related characteristics Previous history of injuries

> > 2010

Work-related injuries (counts)

Physical work demands (yes/no)

2008

8

Final Remarks

- Rigorous epidemiologic approaches needed in occupational injury prevention
- Training the next generation of occupational injury epidemiologists

The University of Minnesota is an equal opportunity educator and employer.
